

## [Q47-Q67 H13-611\_V4.5-ENU Certification - The Ultimate Guide [Updated 2022]

H13-611\_V4.5-ENU Certification - The Ultimate Guide [Updated 2022]

H13-611\_V4.5-ENU Practice Exam and Study Guides - Verified By TopExamCollection

**NO.47** Which of the following steps does the CIFS protocol work need to go through?

- \* Protocol handshake-file operation-security authentication-sharing connection-disconnection
- \* Protocol handshake-file operation-sharing connection-security authentication-disconnection
- \* Protocol handshake-security authentication-shared connection-file operation-disconnection
- \* Protocol handshake-sharing connection-security authentication-file operation-disconnection

**NO.48** According to the physical location of the NAS engine and storage device, NAS is divided into \_\_\_\_\_. (Multiple choice)

- \* Internal NAS
- \* External NAS
- \* System-NAS
- \* Gateway NAS

**NO.49** Which of the following statements about eservice are correct? (Multiple Choice)

- \* The front-end system of eservice is deployed on the client side
- \* eservice then Huawei Technical Support Center.

- \* The management process on the eservice system gathers to maintain the functions of automatic order creation, prediction and prevention.
- \* The eservice cloud system uses Huawei Cloud to identify faults in advance and reduce the difficulty of remote maintenance.

**NO.50** Which of the following statement about DAS is wrong?

- \* DAS refers to the direct connection of storage devices to the server through SCSI cables or Fibre Channel
- \* DAS data is still scattered, and different applications have a set of storage devices. Management is scattered and cannot be centralized
- \* When the direct connection between the server and the storage device leads to new application requirements, the storage device can only be configured separately for the newly added server, resulting in repeated investment
- \* DAS storage space can be fully utilized, storage devices that can be shared by different application servers, and spare storage space can be fully utilized

**NO.51** A bank newly purchased a full-flash storage device (such as Huawei Ocean Stor full-flash memory), and the engineer initialized the device. Which of the following operations is correct?

- \* When logging in to Device Manager, use port number 8088
- \* When creating a LUN, configure the LUN as a Thick LUN
- \* It is required to tolerate 2 data CHUNK failures, and configure the RAID strategy to RAID 5
- \* When creating hosts in batches, create 600 hosts at once

**NO.52** The control frame is one of the core components in storage, mainly including control modules, BBU modules, power modules, management modules, interfaces, etc.

- \* True
- \* False

**NO.53** The data compression feature refers to the reduction of the transmission processing and storage efficiency of the system by reorganizing the data and deleting duplicate data blocks without losing information.

- \* True
- \* False

**NO.54** In a 30 TB storage resource pool, an enterprise created three 10 TB Thin LUN for the online transaction system, mail system and backup system. Since the company has just started, there is very little data on the online transaction system and mail system. The amount of old data that the backup system needs to import is about 20 TB, and the amount of data exceeds the size of the Thin LUN, causing write failure.

- \* True
- \* False

**NO.55** ?Scale-out, horizontal expansion, can improve capacity and performance at the same time

?Scale-up, horizontal expansion, cannot improve capacity and performance at the same time (Multiple Choice)

- \* Description 1 is correct
- \* Description 2 is wrong
- \* Description 1 is wrong
- \* Description 2 is correct

**NO.56** Regarding the Refactoring, which of the following statement is incorrect?

- \* RAID 0, 1, 3, 5, 6 and 10 support Refactoring
- \* Refactoring does not necessarily require a hot spare disk
- \* Refactoring affects RAID performance
- \* Refactoring will not interrupt the RAID business

**NO.57** Which of the following options belong to the form of data? (Multiple Choice)

- \* Text
- \* Video
- \* Sound
- \* Image

**NO.58** When does data become information?

- \* When it has been stored in the correct file format
- \* When the data has been stored in digital form
- \* When the company understands the meaning of the data and extracts the content needed for decision-making from it
- \* When the data has been verified to be correct

**NO.59** Which of the following are the characteristics of clustered NAS storage architecture? (Multiple choice)

- \* Unified namespace, global sharing
- \* High performance, concurrent I/O of multiple arrays
- \* Online expansion
- \* Can provide block-level storage

**NO.60** What scenarios are supported by Huawei's full storage devices, such as OceanStor100D? (Multiple Choice)

- \* Private Cloud
- \* Distributed database
- \* Virtualization
- \* Big data analysis

**NO.61** Which of the following descriptions about the technical characteristics of pre-copy are correct? (Multiple Choice)

- \* Reduce the occurrence of refactoring.
- \* Improve RAID reliability.
- \* Pre-copy needs to suspend RAID group business access in advance.
- \* When the number of errors of the suspicious failed disk exceeds the preset threshold, immediately migrate and copy the data on the suspicious failed disk and import it to the hot spare disk.

**NO.62** Which of the following statements about Thin LUN are correct? (Multiple Choice)

- \* After the Smart Thin feature is enabled, users can create Thin LUNs larger than the maximum physical free space of the storage pool
- \* Thin LUN cannot be directly converted to Thick LUN
- \* All LUNs in a storage pool need to enable the Smart Thin function
- \* When Thin LUN is created, it consumes little storage capacity

**NO.63** An e-commerce website usually has a relatively stable business volume and buys its own servers to build a private cloud operation. However, when the Double Eleven sales promotion comes, the business volume is very large, and the server is rented from the public cloud of the operator to share the holiday load. So, what does the cloud computing deployment model belong to?

- \* Public cloud
- \* Private Cloud
- \* Hybrid cloud
- \* Community Cloud

**NO.64** Which of the following are the types of flash memory particles for SSD hard drives? (Multiple Choice)

- \* SLC
- \* MLC

- \* TLC
- \* QL C

**NO.65** In a traditional RAID group, when a certain number of hard disks fail, the entire RAID group can prevent data loss, and the data recovery process has not yet started. What is this state?

- \* Normal work
- \* Downgrade
- \* Failure
- \* Refactor

**NO.66** In the Huawei OceanStor V3 storage system, which one of the following statements about mapping snapshot LUNs is correct?

- \* The snapshot LUN mapped to the host can only be read but not written
- \* The activated snapshot LUN can be mapped to the host for reading and writing
- \* Snapshot LUN can only be mapped to the same host as the original LUN
- \* All statements above are correct

**NO.67** OceanStor 5300V 3 is a dual-controller converged storage product. It must be ensured that the working controller of the LUN is consistent with the owning controller.

- \* True
- \* False
