# Best H12-722_V3.0 Exam Dumps for the Preparation of Latest H12-722_V3.0 Exam Questions [Q74-Q90]

Best H12-722_V3.0 Exam Dumps for the Preparation of Latest H12-722_V3.0 Exam Questions
Download Latest & Valid Questions For Huawei H12-722_V3.0 exam

NO.74 Which of the following options are common behavioral characteristics of viruses? (multiple choices)
* Download and backdoor features
* Information collection characteristics
* Self-hidden features
* Network attack characteristics

NO.75 The status code in the HTTP response message indicates the type of the response message, and there are many possible values. Which of the following status codes represents the client request The resource does not exist?
* 400.
* 404
* 200
* 503

NO.76 The processing flow of IPS has the following steps;

1. Reorganize application data

2. Match the signature

3. Message processing

4. Protocol identification

Which of the following is the correct order of the processing flow?
* 4-1-2-3
* 1-4-2-3
* 1-3-2-4
* 2-4-1-3

NO.77 An enterprise has 3 server, which is the most reasonable plan when deploy Policy Center system planning?
* manager + controller + FTP + witness database, controller + master database + FTP, controller + mirror database+ FTP
* manager + controller + FTP + master database, controller + FTP + witness database, controller + FTP

+ mirror database
* manager + controller + FTP + mirror database, controller + FTP + witness database, controller + FTP + master database
* manager + controller + FTP, controller + FTP + witness databases, controller + FTP + master database

NO.78 Information security is the protection of information and information systems to prevent unauthorized access, use, leakage, interruption, modification, damage, and to improve For confidentiality, integrity and availability. ,
* True
* False

NO.79 Use BGP protocol to achieve diversion, the configuration command is as follows

[sysname] route-policy 1 permit node 1

[sysname-route-policy] apply community no-advertise

[sysname-route-policy] quit

[sysname]bgp10029

[sysname-bgp] peer

[sysname-bgp] import-route unr

[sysname- bgpl ipv4-family unicast

[sysname-bgp-af-ipv4] peer 7.7.1.2 route-policy 1 export

[sysname-bgp-af-ipv4] peer 7.7. 1.2 advertise community

[sysname-bgp-af-ipv4] quit

[sysname-bgp]quit

Which of the following options is correct for the description of BGP diversion configuration? (multiple choice)
* Use BGP to publish UNR routes to achieve dynamic diversion.
* After receiving the UNR route, the peer neighbor will not send it to any BGP neighbor.
* You also need to configure the firewall ddos bgp-next-hop fib-filter command to implement back-injection.
* The management center does not need to configure protection objects. When an attack is discovered, it automatically issues a traffic diversion task.

NO.80 An enterprise administrator configures the Web reputation system as shown in the figure. Regarding the configuration, which of the following statements is correct?
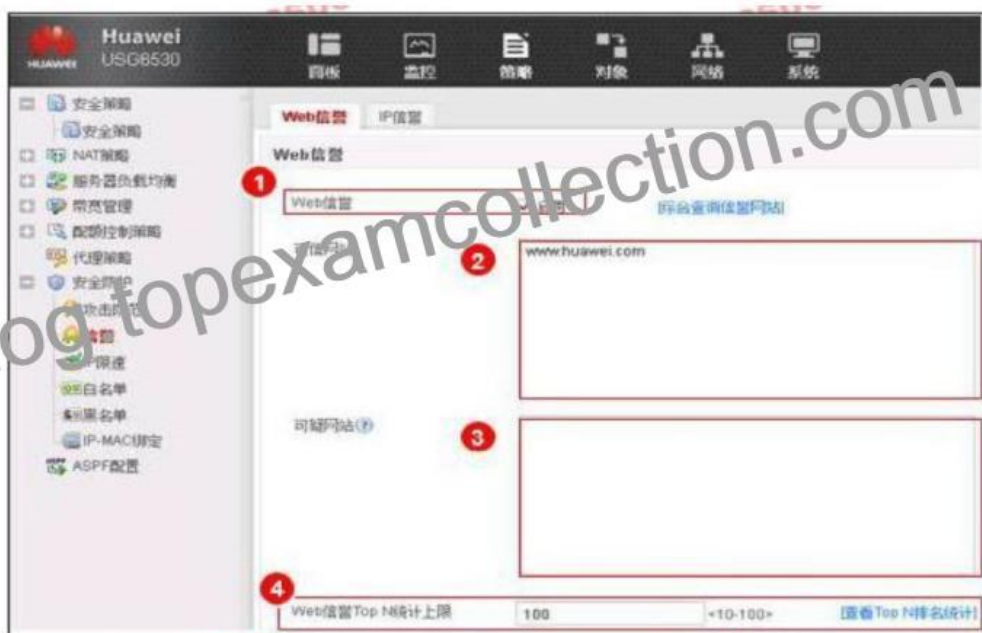

* The content in No. 2 must be configured.
* In addition to this page configuration, you also need to enable the firewall and sandbox linkage, otherwise the page configuration is invalid
* The content in No. 4 must be configured.
* After the configuration is completed, you need to submit the configuration to take effect.

NO.81 In the big data intelligent security analysis platform, it is necessary to collect data from data sources, and then complete a series of actions such as data processing, detection and analysis, etc.

Which of the following options does not belong to the action that needs to be completed in the data processing part?
* Data preprocessing
* Threat determination
* Distributed storage
* Distributed index

NO.82 Huawei USG6000 products can scan and process certain file transfer protocols for viruses, but which of the following protocols is not included?
* POP3

* IMAP
* FTP
* TFTP

NO.83 Which of the following options is not a cyber security threat caused by weak personal security awareness?
* Disclosure of personal information
* Threats to the internal network
* Leaking corporate information
* Increasing the cost of enterprise network operation and maintenance

1. The Netflow analysis device samples the current network flow;

2. Send a drainage command to the cleaning center;

3. Discover the DDoS attack stream;

4.Netior: analysis equipment sends alarms to ATIC management center

5. The abnormal flow is diverted to the cleaning center for further inspection and cleaning;

6. The cleaning center sends the host route of the attacked target IF address server to the router to achieve drainage

7. The cleaning log is sent to the management center to generate a report;

8. The cleaned traffic is sent to the original destination server.
* 1-3-4-2-5-6-7-8
* 1-3-2-4-6-5-7-8
* 1-3-4-2-6-5-8-7
* 1-3-24-6-5-8-7

NO.85 Which way can NAC Agent upgrade package be deployed?
* By IP addresses
* By terminal type
* By account
* By user information

NO.86 The results of the RBL black and white list query on the firewall are as follows:

```
<USG> display rbl-filter whitelist
=================================================
RBL whitelist(2):
IP address Mask
-------------------------------------------------
10.17.1.0 255.255.255.0
10.18.1.0 255.255.255.0
=================================================
<USG> display rbl-filter blacklist
=================================================
RBL blacklist(1):
IP address Mask
-------------------------------------------------
10.18.1.0 255.255.255.0
10.18.2.0 255.255.255.0
=================================================
```

Based on the above information only, which of the following statements is correct? (multiple choice)

* Mail with source address 10.17.1.0/24 will be blocked
* Mail with source address 10.18.1.0/24 will be blocked
* Mail with source address 10.17.1.0/24 will be released
* Mail with source address 10.18.1.0/24 will be released

NO.87 If the user’s FTP operation matches the FTP filtering policy, what actions can be performed? (multiple choice)

* Block
* Declare
* Alarm
* Execution

NO.88 Which of the following threats cannot be detected by IPS?

* Virus
* Worms
* Spam
* DoS

NO.89 Regarding traditional firewalls, which of the following statements are correct? (multiple choice)

* Lack of effective protection against application layer threats.
* It cannot effectively resist the spread of viruses from the Internet to the intranet.
* Ability to quickly adapt to changes in threats.
* Unable to accurately control various applications, such as P2P, online games, etc. .

NO.90 The main attack prevention technologies of Huawei USG6000 products include: source detection, fingerprint learning and associated defense.

* True
* False
